

Granjur B2B Acquisition Pipeline

Automated lead generation & outreach - built in-house, on free tools

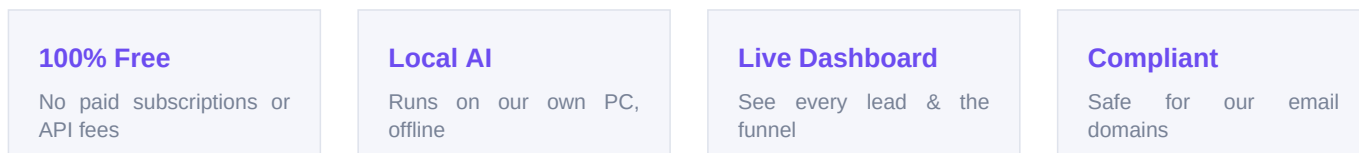

IN ONE SENTENCE

It finds businesses that may need Granjur's software services, researches each one, uses AI to judge fit and write a personalised pitch, and prepares compliant outreach - running the whole way from a single command, with an optional human check before any real email goes out.

HOW IT WORKS

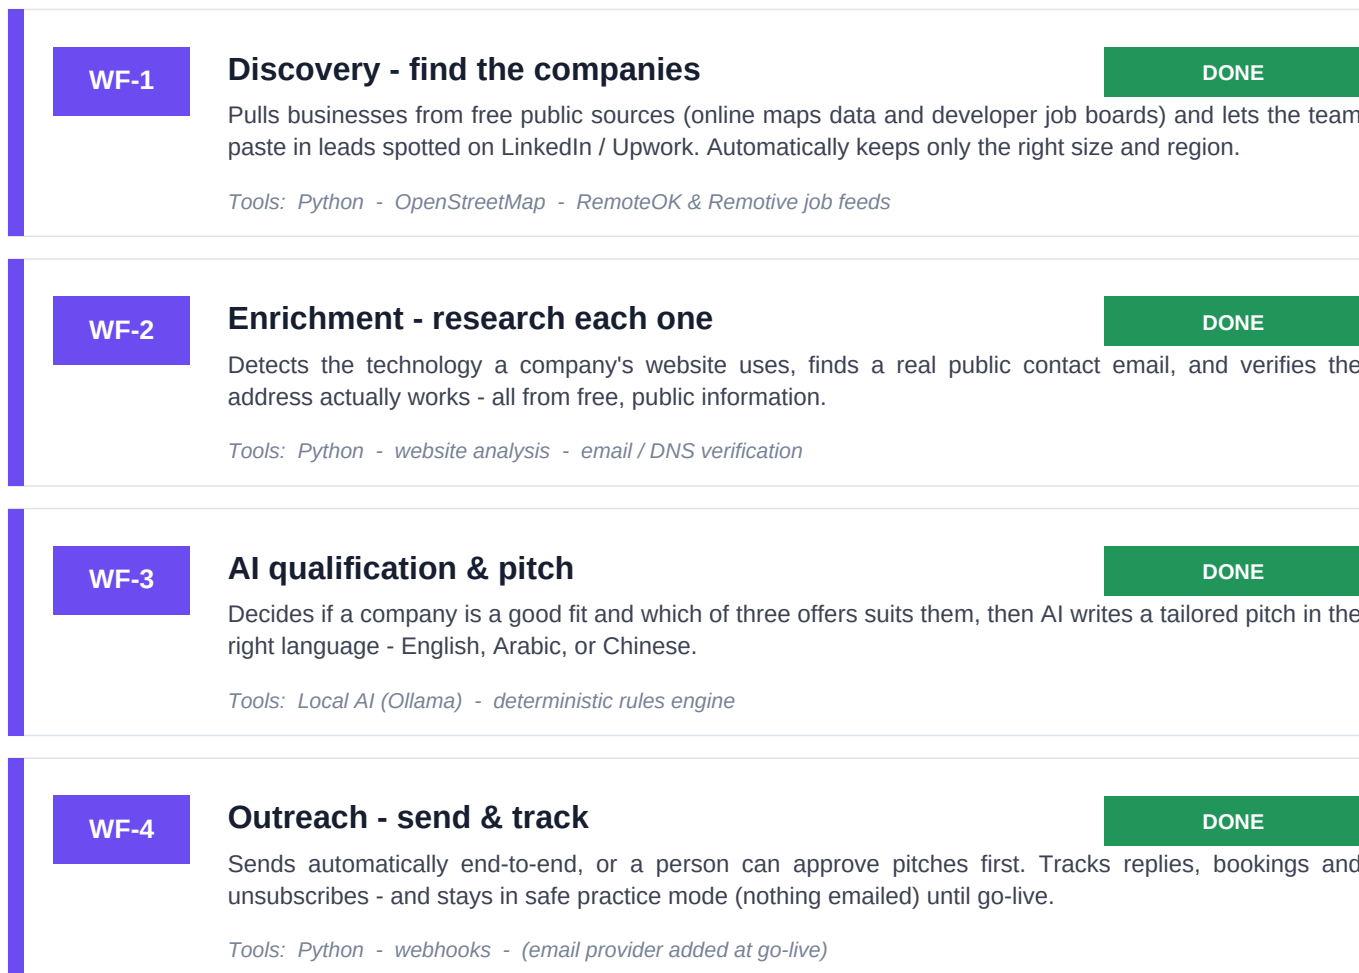

WHY IT'S DIFFERENT

The brain: a central database is the single source of truth - every lead flows through it, stage by stage. The four stages below never call each other; they simply hand the lead on when their job is done.

The four components

STATUS: one command runs all four stages, free, in practice mode. **NEXT:** warm sending domains, then go live.
